

JOB VACANCY P006

CEO SWITZERLAND (ALL GENDERS)

BioCopy is a spin-off from the University Freiburg. BioCopy delivers new technologies based on microarrays for the development of vaccine precursors. We invented the biomolecule copier. Combined with label-free identification of biomolecule interactions our breakthrough technologies provide the possibility of high-throughput screening of thousands of different molecules at once. The patented technology enables the detection of relevant markers of pathogens for diagnostics and the identification of vaccine precursors in just a few days. This guarantees effective and, above all, fast protection against upcoming pandemics and rapidly changing virus strains.

We are looking for a managing director who will develop our location in Basel and is in close contact with the BioCopy R&D branch in Freiburg.

What we are looking for:

We are looking for a CEO for BioCopy AG in Allschwil, Switzerland to transform the BioCopy start-up into an integrated biotech company with an attractive portfolio of products that will generate a growing, sustainable revenue stream and has significant upside potential.

The candidate will be able to identify and prioritize internal and external business opportunities, to focus the organization on execution against these priorities, to create a network of partnerships and to support the BioCopy founders in all aspects of investor and public relations.

Details:

Posted: 28.04.2021

Start date: Immediately

Please send your application documents (letter of motivation, CV, reference contacts) as a single PDF (max. 10 Mb) including the **JOB VACANCY** number **P006** to :

career@biocopy.de

Your tasks and challenges:

- Screening of business opportunities (partnering and licensing) and trends in the vaccine market
- Identifying and prioritizing market opportunities for BioCopy
- Manage external relationships with potential partner companies
- Lead the (financial) evaluation of business opportunities
